	DENIAL OF STATE ENGINEER											
•	deny This is to certify that I have examined the foregoing application, and do hereby argue the same, subject to the wing limitations and conditions:											
be	This application is hereby denied on the grounds that it would not in the public interest to approve permits to appropriate water from urces on which water rights do not exist.											
The	amount of water to be appropriated shall be limited to the amount which can be applied to beneficial use, and											
	o exceedcubic feet per second											
	must be prosecuted with reasonable diligence and be completed on or before											
Proof	f of completion of work shall be filed on or before											
Appl	ication of water to beneficial use shall be made on or before											
	f of the application of water to beneficial use shall be filed on or before											
	in support of proof of beneficial use shall be filed on or before											
	oletion of work filed											
	of beneficial use filed

PUMPED STORAGE PROJECT NUMBER 2 PEGLEG CANYON QUADRANGLE RESERVOIR SITE NO. 5

This application is for storage of water in an artificial reservoir (forebay) to be constructed as part of an electrical energy pumped storage project. This project consists of a forebay and afterbay that will recycle approximately 12,000 acre feet of water per day. The reservoirs, will be connected to quasi-municipal water distribution facilities. The estimated annual evaporation from the forebay and afterbay in this project is less than 4,000 acre feet. The peak generating capacity of this project is about 1,500 megawatts. The power plant will be located at a point along a line connecting the forebay and afterbay.

The proposed dam in Section 12 T38N R18E M.D.B.&M. will be approximately 120 feet high and will submerge approximately 770 acres of land lying below an elevation of 6,240 feet mean sea level located within Sections 1, 11, 12, and 14 of T38N R18E M.D.B.&M. A 20 foot high saddle dam will be constructed on the west side of the reservoir in Section 11 T38N R18E M.D.B.&M. The average total vertical head of this project is approximately 1,650 feet. The selection of the power plant location, dam location and construction methods will depend upon a detailed site investigation and project optimization.
